The present invention relates to a distance measuring method and a distance measuring apparatus in a photoelectric distance measuring apparatus used for measuring a distance, and more particularly to a distance measuring method and a distance measuring apparatus wherein, when a test light from a distance measuring light source is irradiated on a distance object, reflection light reflected by the object is received to measure a distance from the position of the distance measuring light source to the

position of the distance object. In a photoelectric distance measuring apparatus, when a test light is irradiated from a light source such as a LED, it is necessary to control an intensity of the test light to an appropriate level for improving accuracy of measurement. In some cases, an intensity of the test light is controlled by controlling an amount of current applied to the light source on the basis of the result of measurement of an amount of light received by a photoelectric detector. In this case, since the amount of light received by the photoelectric detector is determined based on an intensity of the test light and an amount of reflection light, it is necessary to detect the test light without influencing the amount of reflection light. In order to detect the test light without influencing the amount of reflection light, it is necessary to

modulate the test light so that the reflection light may be not influenced by the test light. In order to control the amount of test light appropriately, a photoelectric detector is disposed in a position where the test light is irradiated. There has been proposed a photoelectric distance measuring apparatus wherein a photoelectric detector is disposed in a position where a reflection light from an object is received. In the photoelectric distance measuring apparatus, a portion of the irradiation light is modulated, and the amount of reflection light received by the photoelectric detector is detected to

HS PDF Reader Activation Code is a Mac OS X application that was developed to bring the PDF reader features that Mac OS X

users are used to, even though they are yet to enter a native OS X app in the Apple ecosystem. Despite the fact that is a Mac OS X app, which is not compatible with Mac OS X v10.5, 10.6 and 10.7, it is not meant as a replacement of the Mac OS X native PDF viewer, as the title of the app would suggest. It is rather a powerful PDF reader with more features that Mac OS X users are used to having right out of the box. Perhaps the most important aspect of this app, when loading it, is the fact that is loaded straight into RAM. This allows users to instantly open a PDF file, without the need for needing to save it first. HS PDF Reader does not require an Apple Macintosh to operate, as that is the case for other PDF readers that have been developed for Mac OS X. HS PDF Reader Features: For those who prefer their PDF reader apps as lean as possible,

without compromising on functionality, HS PDF Reader will have a lot to offer. The app, as mentioned, comes with quite a number of features and, perhaps, the most important being the fact that it does not need an Apple Macintosh to operate. It was developed for Mac OS X v10.6, 10.7 and 10.8, and supports them all. The app, is a PDF viewer that has been given a fresh look, one that aims to be simple and stylish. The inclusion of the latest Mac OS X v10.8 Lion, related apps and features, as well as a new user interface for macOS v10.6, made it possible. The app provides a revamped user interface for a more effective navigation. It offers a simple two panel user interface, which is divided into two sections. The left side contains the navigation controls and the right contains the interactive elements. There are a total of six

tabs at the bottom of the app's window that can be used to navigate quickly throughout the app. They help users to find the things that they are looking for, allowing users to work with whatever is on the page.

Additionally, the app comes with full support for Mac OS X v10.6, 10.7, and 10.8, as mentioned above. This is an important aspect, because it makes the app compatible with Mac OS X v10.5 in a direct manner. b7e8fdf5c8

The importance of posterior laxity of the knee as a consequence of the release of the posterior structures of the knee ligament complex from the intermuscular septum. The purpose of this study was to review the failure mechanism of total posterior knee ligament (PCL) reconstruction using the quadriceps snip at the intermuscular septum with regard to release of the posterior structures from the intermuscular septum. The results of treatment of 14 patients after an open release of the

intermuscular septum were analyzed. The clinical and radiological results of the treated patients were evaluated retrospectively. The mean posterior laxity improved from 3.8 +/- 1.6 mm preoperatively to 2.9 +/- 1.5 mm postoperatively. The mean posterior gap at both 30 degrees and 60 degrees of flexion improved from 5.4 +/- 3.6 mm to 2.5 +/- 2.2 mm and from 5.6 +/- 2.7 mm to 3.2 +/- 1.9 mm respectively. The surgical treatment was successful in the long-term follow-up. It was concluded that the reconstruction of the PCL using the quadriceps snip at the intermuscular septum is a stable and effective method in the surgical treatment of PCL injury. After release of the PCL from the intermuscular septum, the remnant PCL is anatomically fixed to the intermuscular septum.
