Anti Deep Freeze 7.51

when i installed deep freeze 8.0 on my test system, i immediately noticed that the program did not have any new features.. if i did not have a deep freeze evaluation license, i would not have been able to use the program. as far as i know, the 8.0 license did not expire as the 7.5 license did, but i cannot be sure. however, as i used the eval license, i could use the program for 60 days, allowing me to install it on my workstation. the first thing i noticed when i installed 8.0 was that the deep freeze utility could not detect if there was any issue with the deep freeze standard.. after installing the deep freeze standard, i was not able to use the utility to detect the issue. i tried to install the deep freeze update on my evaluation machine, but it would not work. the deep freeze utility could not detect that the deep freeze standard was installed on my machine. the deep freeze utility does not show any details about the deep freeze standard, such as the update data, or the version, or the license status. i have tried to reinstall windows 7 ultimate and i get an access denied error. i have not changed any passwords in windows. i had to get into my bios to change the time. this made me think that the anti deep freeze software was having trouble getting into the bios. after changing the time to the day after that i was able to install the anti deep freeze software. however, i still cannot log into windows. i have to find out how to change the password. i have tried to reinstall windows 7 ultimate and i get an access denied error. i have not changed any passwords in windows. i had to get into my bios to change the time. this made me think that the anti deep freeze software was having trouble getting into the bios. 5ec8ef588b
