
E2222 C3322 Flash Loader 7.4.7 S

Download

parameters request: urlrequest the absolute or relative url of the swf, jpeg, gif, or png file to be loaded. a relative path must be relative to the main swf file. absolute urls must include the protocol reference, such as or file:///.

filenames cannot include disk drive specifications. context: loadercontext (default = null) a loadercontext object, which has properties that define the following: whether or not to check for the existence of a policy file upon loading the object the applicationdomain for the loaded object the securitydomain for the loaded object the imagedecodingpolicy for the loaded image object if the context parameter is not specified or refers to a null object, the loaded content remains in its own security domain. when flash programming a new app, if you see this message you will have to reset to defaults the "app" settings. after this is done, do flash again without resetting, it will work fine. when using swd mode you can flash in pause (halt) mode if you set the following :- 1. select "settings" 2. set "halt on pause" to "off" 3. set "halt on nop" to "on" i get the following error during the flash :1. after reset, flashloader runs without error.2. if the flashloader is launched in swd mode, flashloader runs normally.3. if the flashloader is launched in jtag mode, the following error is displayed :

E2222 C3322 Flash Loader 7.4.7 S

if you have time and want to learn how to flash it, you may want to run the following instructions: flash the binary (using the same procedure as before):

ftp://\$user:\$password@\$servername/stmicroelectronicssoftwareflash loader demo/stmflashloaderdemo.exe or if you have j-link hardware: if you have no j-link hardware, you can easily flash it using j-link on a pc, mac, or android device. j-link is a pc-based serial flash programmer/debugger. you can download the software from and currently, the software is available for windows, mac os x and linux. you can either use the supplied console application for j-link or use the gui interface. with the console application, you simply type "jflash" and it will flash the binary. you can also read the serial number back from the binary to verify it was flashed. a sample output of the console application is: flash closed jflash serial=00000000 with the gui application, you simply select the binary to flash and set the serial number as the value displayed in the gui. a sample output of the gui application is: serial value: 0 flashing 0x00000000 in 0x00000000 once the binary is flashed, you can read the new serial number from the binary using the same "jflash" command as above. the output should be the same (minus the new serial number). if you have time and want to learn how to flash it, you may want to run the following instructions: if you have no j-link hardware, you can easily flash it using j-link on a pc, mac, or android device. j-link is a pc-based serial flash programmer/debugger. you can download the software from and currently, the software is available for windows, mac os x and linux. 5ec8ef588b
