SINCE I started using computers in the early 1980's, I have been fascinated and amazed at the miraculous power of computers, and the astounding tools designers have to create innovative content and digital art.

- When I started using computers, digital art was crafted with a pen and picture wasn't a form of production that I could fully understand or interact with.
- I remember being quite jealous of designers at that time and I always wished that we could collaborate in real time with someone like you do today and vice versa.
- It wasn't until the early 1990's, when scanners and a graphics program called Paint Shop Pro (PSP) were introduced. This greatly expanded my ability to create digital artwork and to export and project it in the real world.

Adobe is accelerating the pace of innovation in Photoshop desktop to make it easier for you to create more complex and compelling images in ways that were previously impossible. With new improvements to the Content-Aware Fill feature, you can now use it to replace any object in an image with content from another image quickly and precisely. Simply select the object or objects you want to replace, then choose the new content in the panel directly to the right, and the Content-

Aware Fill tool will magically find a match for the new image content. New additions to the Selection panel will help you make more accurate selections. Now, you can create rectangular selections by double-clicking on a corner, similar to how you select with any other tool. If you make a mistake, you can quickly reverse your selection using the new Undo command. More intuitively, when you perform a selection or painting, all strokes are intuitively connected, and you can select, edit, reverse, remove, and move all strokes at once. You can also add a number of transparency masks to your image and easily swap mask colors using the new Duplicate and Merge Mask commands.

Sharpen / Blur: The Sharpen tool allows you to edit the details of an image. While the Blur tool allows you to blur parts of an image. These two features can be used in several ways to correct a photo, including removing noise and reducing glare from photographs. You can use this software to edit your photos. The software has a lot of features which include the Adjustment Layer, the Liquify Filter, the Healing Brush, the Selection Brush, the Spot Healing Brush, and the Clone Stamp.
