My boss wants me to start on a big and bigger project. The problem is that a lot of the guys are working on this project right now, which means that there is no time to get me up to speed. I am getting every day less and less time to work on my other projects and I don't know what is going to happen. Not that I would complain, I would be happy with a solid 40 hour week, but that is not possible in this company, unless I do not do anything. So I decided to give up on this and work on my other projects as long as I can. The projects are all very doable and I can finish them in a week or less, I even have a week's vacation coming up. It's now possible to animate notes using parametric properties so that your annotations can respond to changes in your drawing or model. Geometric notes: Import geometric lines and polygons to annotate your drawings. Geometric notes are text boxes that are automatically placed and aligned with the geometric features of your drawing. With graphical properties, you can quickly add dimensions, labels, and other annotations to geometric objects. (video: 1:34 min.) A new type of markup and annotation feature called notes.
