How do I open and work with photos in Photoshop Elements? Photoshop Elements, like Photoshop, is a powerful image-editing program.

It provides all the basic tools you need to make changes to your photos. Unlike Photoshop, Elements does not have as many automated features as Photoshop.

However, it does allow you to easily open and work with photos. Open a photo by clicking its file name in the Photos window. This opens the photo in the Photo Editor. You can view all photos in your Photos window by clicking the arrow button at the left end of the window. Click one of the open photos to open it in the Photo Editor. A menu will appear at the top of the Photo Editor, indicating the function or operation you are about to perform. Go to the File menu and select Edit > Edit in Photoshop Elements, or press the E key on the keyboard, or choose File > Edit in Photoshop Elements. Photoshop Elements opens in Photoshop's native mode, which allows you to access all the features that are unique to Photoshop. You can then browse through the original file, select the photo elements or select other edits you want to make, then select the "Edit" button at the top of the window. Photoshop Elements will create a new open version of the image in the Photo Editor. Photoshop Elements often loses changes when you close the original file. This can make it easy to forget to save the changes you've made in your latest edits. You can use the Save a Copy function in Photoshop Elements to save the image as a duplicate of the latest version. You can use the Save a Copy function as often as you want, 05a79cecff

Given the following code: import numpy as np a = np.array([1,3,2,2,3,1,1,1,2,2,3,4]) print np.mean(a) I would expect the output to be 3.15 which is the average of 1 and 2; however I am getting 8.0, even though the algorithm clearly should do this right? A: The issue is that you are not using the numpy mean algorithm. You are just using the built-in average of integers: If ndmin is not None, returns the average of the minimum number of items. Simply drop it and it will work: a = np.array([1,3,2,2,3,1,1,1,2,2,3,4]) print np.mean(a) In a typical computer system, a processor or other type of system controller accesses system memory through a cache, such as a cache-based direct memory access (DMA) controller (CDMA).
