The prominent photocatalytic activity of visible-light-driven Zn2SnO4/SnO2 nanostructured metal-semiconductor heterojunction has been studied in the degradation of

organic pollutants. The structural, optical, photocatalytic properties and the relationship between the photocatalytic activity and photocatalytic mechanism of the as-prepared Zn2SnO4/SnO2 nanostructured metal-semiconductor heterojunction have been investigated. The formation of Zn2SnO4/SnO2 heterojunction can be confirmed by X-ray diffraction, Fourier-transform infrared spectroscopy and X-ray photoelectron spectroscopy. And the heterojunction performs an enhanced absorption of visible light and thus produces more photo-generated electron-hole pairs in heterojunction, which can generate more superoxide radicals to degrade organic pollutants. The degradation rates of methylene blue, methyl orange and phenol under visible-light irradiation are improved 5.04-26.22%, 12.50-67.98% and 46.28-74.71%, respectively. Furthermore, the active species trapping experiments indicate that a photosensitizer such as methylene blue should be removed during photocatalytic process.Q: How to position a div relative to the center of the screen/page/viewport/browser window? I

am using the Bootstrap CSS library and I want to position one div relative to the center of the screen/page/viewport/browser window. Ideally, I want to be able to use something like: .my-text { position: absolute; top: 50%; left: 50%; } The left 50% is relative to what? It should also take into account how this is being rendered in the browser. Is there any way to
