What's new in Hot Tiles:

X-COM: Terror From the Deep (titled X-COM: UFO Defense in Europe and Japan) is a 1996 tactical turn-based strategy video game developed by Microprose and published by The 3DO Company exclusively for the 3DO Interactive Multiplayer and the PlayStation. X-COM:TFTD is the sequel to 1994's X-COM: UFO Defense, and is the first in the X-COM series to bring turn-based tactics to the series. Contents Gameplay X-COM:TFTD differs from its predecessor primarily in that it is a turn-based tactical game, rather than an action game like UFO Defense. As well as making combat sequences more strategic with the addition of several game scenarios, X-COM:TFTD also differentiates itself from its predecessor in that some of its game scenarios revolve around the history of the fictional extraterrestrial threat, and some of the game's alien units can only be commanded by human commanders. This large scope of the game extends to both the number of units available to the player and the number of areas of the game that the player can travel to. An expansion pack, entitled Enemy at the Gate, was also released for the game. Plot The player takes on the role of Colonel William "Wild Bill" Egan, the commander of the infamous X-COM, a Tactical Operations Unit funded by the United States' Department of Defense. The story involves Colonel Egan's defense of the United States' interest in Earth against an alien invasion. In X-COM:TFTD, the player must rid the Earth of the alien threat in a number of scenarios, each of which involves a small band of soldiers who fight in a certain geographical location. Each scenario is accompanied by a number of set-piece missions. Development Graphics X-COM: Terror From the Deep featured a 3D rendered interface (using version 2.5 of the 3DO HAL) which initially only supported 2D sprites. After successful development of the 1997 grandmaster's conversion of the game to 2.6 of the 3DO HAL, the game was released on February 24, 1997. The 3D interface supported 3D depth maps, which were created by the Director's Object for the game. The 3DO Forceware version 2.6 enabled the use of new 3D parameters within games, including the X-COM:TFTD 3D renderer. In addition to depth maps, 3D
