### Portable Timestamp-GUI Incl Product Key PC/Windows

Timestamp is a command-line utility that lets you change time attributes of files on the Linux platform. The basic idea behind Timestamp is to change the Last Access, Last Modification or Last Written time attributes for a file. The timestamp can be changed to any value greater than the one currently set, or a specific timestamp can be chosen. In case you want to reset the attributes to their original value, the timestamp utility does that automatically. Timestamp-GUI is an interactive graphical interface for the timestamp command-line utility, created to make it easier to modify time attributes for files, right from your desktop. Program features: - User-friendly GUI interface. - Easy batch processing. - An option to set a specific timestamp for the files. - Support for the time stamp formats supported by the timestamp command-line utility. - User-friendly customization options. - A simple yet powerful batch processing tool. - Changes the time attributes of the file or folder you select in a simple and intuitive interface. - Allows the user to choose from a list of supported timestamps. - Customizable color themes to match your desktop preferences. - Integrates the option to update all files inside a folder, or only the ones you want. - An option to cancel the action. - An option to reset the attributes to their original values. - A user-friendly scheduler to automate recurring tasks. - A full history of the file timestamps you have changed. - A scheduler to run files or folders on a specified time. - A scheduler to run files or folders once per day or week. - An option to let you know when an action finishes or fails. - An option to save the current timestamp and restore it after a reboot. - An option to change the command-line interface language. - A scheduler to change the time of an hour every minute. - The system requirements are: - GNU/Linux system. - 2 GB of RAM. - 100 MB of free disk space. - 512 MB of free space on the USB flash drive used to run the app. - JRE 1.6 or higher. - Xming, MinGW or Cygwin to run the app. - Any text editor. - A USB flash drive with at least 2 GB of space. ## What's New In?

This is the portable counterpart of Timestomp-GUI. As the name suggests, it is a graphical interface for the Timestomp command-line application, which enables users to seamlessly change time attributes for files. Since installation is not a prerequisite, you can drop the executable file anywhere on the hard disk and just click it to run. It is also possible to save Timestomp-GUI to a USB flash disk or similar storage unit, in order to run it on any machine directly. An important aspect to take into account is that the Windows registry is not updated with new keys, and no files are created on the disk by the app, leaving it clean after removal. The interface is made from a regular window with a clean and intuitive structure, where you can point out the Timestomp location and file whose attributes you want to change by using the file browser. Drag-and-drop is not supported. Batch processing is possible, meaning that you can alter time attributes for multiple items at once, by including an entire folder in the task. So, you can select between changing the time for last modification, access or creation, or modify everything. Timestomp-GUI also integrates an option that lets you change a file's attributes by making them equal to the ones of another file from the hard drive. Modifications are applied with the click of a button. The program runs on a very low amount of CPU and RAM, and carries out tasks quickly and effortlessly. We have not come across any kind of issues in our tests, since the tool did not hang, crash or pop up error dialogs. All in all, Timestomp-GUI should meet the requirements of users looking to seamlessly modify time attributes for files.
