The update adds capabilities in areas where the team felt was most needed, but still managed to add new capabilities and fixes as well. The interface clean up is well appreciated by anyone who plans to use the app with a number of libraries or multiple images in a single project. The VR Switch tool allows you to "swap" the left and right VR adjustment layers to interchange two different adjustments within a single image. The new and most powerful tool is called the Adjustment Tile option, which allows you to preview a preset adjustment (such as black and white, purple, or sepia) in multiple locations. This is a tool designed to work best with Adjustment Libraries. The former is a function that allows users to store select adjustment presets (color, brightness, saturation, etc.) they find useful. This new feature isn't as easy to use since the VR Switch tool releases your adjustment layer to run in the background of the image, so you can't work on the same image at the same time. Perhaps Photoshop's most notable change in CS6 is a new GPU-based Blur/Sharpen filter. It's available via a single-click button, not a separate dialog box. Compared to CS5, this new filter offers improved edge detection for better sharpening and makes nondamaged sharpening possible in a structure-based way. However, discerning the difference between a nondamaged sharpening in CS6 and CS5 is impossible to discern from the presets, so it's more of a matter of sheer convenience. Because of this new blur/sharpening tool's ability to be nondamage, preview is useful because it shows an image of how it will look after the blur/sharpening is applied. Since the filter options to adjust the original image are not so finely tuned, you may want to do that on a separate layer afterwards for the best results.

When you select an object that you will use in your image, it is usually easy to pick the "background" in your image and remove it from it. This is because you will not want your subjects or your background to be very similar in color. To do this, you need an easily recognizable object that is the same color as the background, and then you can select that object to clip the background. To select objects, you can use a variety of tools found in Adobe Photoshop. You can use the pencil tool, and then you can right-click to select a path, polygon selection tool to select objects, edges, and points, or you can simply use the Select by Color option.
